SUMMARY

Full Stack Web Developer specializing in Frontend, with 3+ years of experience building dashboards and modern web applications, with experience building AI-powered automation workflows and CRM integrations. Proficient in React.js, Next.js, Vite, and JavaScript ecosystems with Node.js, Express, and databases (PostgreSQL, SQL Server). Experienced in Agile/Scrum environments. English level: C1.

PROFESSIONAL EXPERIENCE

Node.js Developer - Web Scraping | Mountain Project Scraper (Personal Project)

Scraper extracting climbing routes from mountainproject.com, collecting name, location, and difficulty grade, exported to JSON.

- Browser automation with Playwright to handle JavaScript-rendered content.
- Exponential backoff retries and resource blocking to reduce load times.
- Field-level selectors with fallbacks to tolerate layout variations.

Full Stack Developer | Crux Escalada | Mar 2026 - Present

Internal web application for a climbing gym to manage schedules, slots, and attendance centrally.

- Shift and slot management by time block directly from the browser.
- User administration panel and attendance tracking.
- QR code integration for faster daily check-ins by staff.

Co-Founder & Full Stack Developer | Pulso Studio | Feb 2026 - Present

Digital studio helping professionals and businesses build their online presence.

- Content architecture and key messaging definition alongside clients.
- Design and development of websites and landing pages focused on lead generation.
- Form integration, email automation, and analytics for user behavior tracking.

Full Stack Developer | Pulso CRM — Pulso Studio (Internal Project)

All-in-one internal dashboard consolidating CRM, agile project management, and financial tracking into a single platform. Stack: React 19, Vite, CSS Modules, Zustand, TanStack Query v5, Supabase, @dnd-kit, Vercel.

- Consolidated 4 operational processes (clients, projects, finances, and credentials) into a single platform, eliminating the use of scattered tools.
- Designed and implemented the full-stack architecture end-to-end: Postgres database modeling with multi-tenant RLS, Supabase API, and decoupled frontend with custom hooks on TanStack Query v5.
- Built a drag-and-drop kanban board (@dnd-kit) with optimistic mutations, achieving imperceptible latency on state updates.
- Built the entire design system from scratch (CSS Modules, no external UI libraries), maintaining visual consistency across 6+ functional modules.

Full Stack Developer | Agente Conversacional B2B — Personal Project | May 2026

Development of a B2B conversational agent on Telegram integrated with Salesforce CRM.

- Design and implementation of a complete n8n workflow with AI Agent (Claude API), conversational memory, and multiple tools.
- Salesforce REST API integration: catalog queries (PricebookEntry), client registration (Account), and real-time order creation (Opportunity).

- Implementation of Apex REST endpoint for transactional operations in Salesforce.
- Local server exposure to the internet via Cloudflare Tunnel for Telegram webhook reception.

Full Stack Developer | GROOVY E-commerce (Personal Project, in progress)

Stack: Next.js + Tailwind CSS

- Design and implementation of a design token system (colors, typography, spacing) for an outdoor apparel brand.
- Full e-commerce development: catalog, product page, cart, and checkout.
- Frontend architecture designed for maintainability without external UI frameworks.

Full Stack Developer | B2B Landing Page (Freelance — Confidential Client)

Stack: React 19 + Vite + CSS Modules

- Design and implementation of a corporate dark mode interface with glassmorphism.
- Hero-integrated quote form with inline validation and no external libraries.
- Custom design system (color and spacing tokens) without UI frameworks.

Full Stack Developer | Insurance Policy Management System (Freelance — Confidential Client)

Stack: React 19 + Vite + Supabase (PostgreSQL + Auth)

- CRUD for clients, vehicles, and insurance contracts.
- 3-step guided flow for policy issuance.
- Vehicle status automatically derived from active/expired contracts.
- Admin panel with auth, protected routes, and light/dark theme.

Full Stack Developer | ANT Automation | Jul 2023 - Mar 2026

- Dashboard and corporate web application development using React, Redux, Material UI, and Highcharts.
- Custom plugin and feature implementation for internal platforms.
- Backend development with C#, .NET, Entity Framework, and SQL Server.
- REST API integration and SQL query performance optimization.
- Docker usage for development environments and service deployment.

Full Stack Web Developer | Coneq | Dec 2024 - Jan 2025

Corporate website for an engineering and construction company. <https://coneq-sas.vercel.app/>

- Full corporate site development with responsive design (mobile, tablet, desktop).
- Multilanguage system implementation with i18n.
- SEO optimization and web performance tuning.
- Form integration with EmailJS and interactive maps with LeafletJS.
- Stack: React, CSS, EmailJS, LeafletJS.

Front End Developer | QXM (Quien x mi) | Sep 2023 - Dec 2023

- Landing pages and interactive dashboard development.
- Reusable component implementation in React and Angular.
- Styling with SCSS and Bootstrap.
- Collaboration with backend built on NestJS and SQL.

TECH STACK

Frontend: React, Next.js, Angular, JavaScript, HTML, CSS, SCSS, Bootstrap, Material UI, Tailwind CSS, CSS Modules

Backend: Node.js, Express, C#, .NET, NestJS

Databases: SQL Server, PostgreSQL

Tools: Git, GitHub, Bitbucket, Docker, Jira, Notion, n8n (AI Agents, automatizaciones), Supabase, Vercel

AI Tools: Claude, Notion AI, n8n AI Agents (tool use, memory, system prompt design)

CRM & Integrations: Salesforce (REST API, SOQL, Apex), Telegram Bot API

Other: Python, C++, C#

Other: design tokens, glassmorphism

EDUCATION

B.Sc. Information Systems | Universidad Nacional de San Juan | 2024 - Present

Full Stack Web Developer Bootcamp | Henry Bootcamp | 800 hours | 2023

LANGUAGES

English: C1 (Advanced) | **Spanish:** Native | **Italian:** A2
